

Our K-2 class uses ST Math as part of our Mathematics Intervention. The students play learning games to help them learn to count and use basic operations.

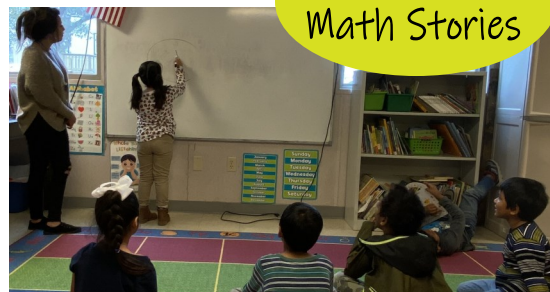

The K-2 students played a Math game in which the students took turns telling a story that included adding or subtracting numbers. They practiced the operations on the whiteboard.

## ST Math

One of the best experiences is watching our youngest students learn how to read! If you'd ever like to come read with or to our students, please call me! :)

# Legacy Ranch: Discovering Joy and Greatness

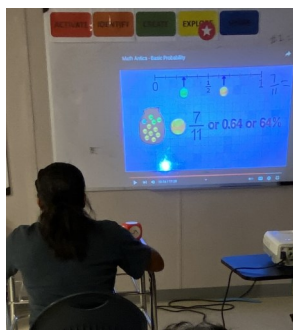

Fall 2021, 3rd Six-Weeks

The Middle School and High School students worked on the different parts of speech in ELA. The exercises focused on Holiday themes toward the end of the six weeks!

Our 3rd-5th graders spent time working on different parts of speech during ELA. They also worked on forming compound words.

In Mathematics, the Middle School students focused on Probabilities while the Algebra 1 students were learning how to work with Polynomials.

In Science, they have been investigating Earth's changes. One of their projects focused on the effects of Erosion (pictured above).

One big highlight this Fall has been the addition of our new Office Building! We officially moved in on Friday, December 3rd, with lots of help from our students and Director of Residential Instruction!

The Office building houses our Campus Principal and Registrar, and has an area that is used as a break room and conference room for Staff, and can be used for Tutoring small groups or individuals.
